Notice of Project

Bayshore Pumping Station Upgrades

The Bayshore Road Pumping Station on 240 Bayshore Road, does not have sufficient capacity to handle peak flows which has resulted in operational issues, sewer backups, and property damage related to flooding. In addition, much of the station equipment has reached the end of its useful life and requires updates. The MBQ has decided to proceed with replacing aging equipment and providing increased storage capacity to accommodate existing peak flows. Construction of these upgrades is expected to begin in January of 2022 and continue through to June 2022. Weather and other unexpected delays may extend this expected time of completion.

Construction of the Bayshore Road Pumping Station Upgrades includes:

- Installation of new sewage pumps, valves, and discharge piping;
- Installation of new equalization tanks to accommodate excess flows;
- Temporary relocation of existing utilities to allow for tanks to be installed;
- Electrical upgrades including the installation of a new outdoor generator set.

These upgrades will involve an above ground bypass from the sewage pumping station while the pumps and wet well internals are being installed. Other existing utilities on the pumping station property on 240 Bayshore Road will be temporarily relocated above ground during construction. All utilities will be reinstated upon completion of construction. In addition, there will be excavation and breaking of bedrock in the pumping station property to install the new equalization tanks. Construction will be limited to during normal working hours on weekdays only to minimize disruptions to the community.
