

Monarch Monitor Program

Mohawks of the Bay of Quinte is working toward better protecting our at-risk Monarch Butterflies. In partnership with ECCC, and CIER, MBQ is implementing a Monarch project that will help our butterflies now and for generations.

Monitoring and Conservation:

MBQ has a Monarch Monitor that is surveying, monitoring, and mapping MBQ property to collect information on our current population of monarch butterflies, and their habitat. Information collected will help with monarch conservation!

Get Involved:

Share your Monarch sightings! Take a picture, record location and any pertinent information.

VISIT <https://mbq-tmt.org/monarch-monarch-habitat-observation/> to help MBQ collect data!

Photos shared may be featured on the new MBQ Environment Page!

Habitat Rehabilitation:

When flowers have gone to seed the Monarch Monitor will gather seeds from identified native wildflowers, while respecting traditional practices. Seeds will be used to rehabilitate Monarch habitat on the TMT

For more program information contact Megan @ 613-396-3424 ext.125 or environment@mbq-tmt.org

Visit <https://www.mission-monarch.org/what-is-a-mission/> for more Monarch information and to participate in national monarch surveys for your area.
