

Bay of Quinte Angler Surveys

May through August 2023

Survey Areas

The MNRF-Lake Ontario Unit staff will be on the Bay of Quinte interviewing anglers about their catch. The angler survey begins on May 6 when the recreational walleye season opens and runs until mid August.

The survey is conducted every weekend and two to three weekdays. Information is collected on angler catch and harvest including biological information from fish being harvested.

Participation in the interviews is voluntary. Survey information helps monitor angler harvest and measure the overall health and nature of the recreational fishery.
